### **REASONS FOR ALLOWANCE**

2. The following is an examiner's statement of reasons for allowance: The invention, “Heat-Cooking Apparatus” is in the field of cooking units that generate steam for the cooking process and provide safety means that prevent a user from being discomforted by the steam. The invention can be described as follows: A heat-cooking apparatus comprising: a heating chamber having an opening through which an article-to-be-heated is put into and taken out of the heating chamber; a door which is pivotably hinged in a bottom part or top part of a casing for housing the heating chamber and with which the opening is opened and closed; and a heating medium generating unit for generating a heating medium, the heat-cooking apparatus heating and thereby cooking the article-to-be-heated placed inside the heating chamber by means of the heating medium, wherein the heat-cooking apparatus further comprises: a blowing unit that blows air so that the air passes the opening sideways through ports located above a center of the opening and parallel to a rotation axis of the door when the door is opened, and the blowing unit blowing the air only across a part of the opening substantially above a center thereof. The prior art of reference in a similar field of

Art Unit: 3749

endeavor is U.S. PgPub 20020179588 to Lubrina et al and U.S. Patent 4898319 to Williams. Lubrina teaches an oven with a heating means that generates steam in order to cook an article of food. Williams teaches a brazing oven that is capable of generating a stream of air across an opening of the oven cavity when the door is opened. The air curtain prevents gas from exiting the oven interior. The prior art of reference, alone or in combination, does not show certain benefits of the current invention. Specifically, the prior art does not show a safety means comprising ports located above a center of an oven opening that guide air from a blowing unit sideways only above a center of the opening. Because of the location of these ports, when an oven is opened, an air curtain is formed therein tempering the steam and trapping the steam in the oven, therein preventing discomfort to the user. The location of the ports also allow for a lower-powered cooling fan, implying less energy consumption and possibly smaller components. For these reasons, the invention is unique and therefore allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
